

# DIY 2X4 PLATFORM BED

watch the tutorial on youtube

queens size\*

# THE PLATFORM

the platform is made of 23 slats with 4 spacers between each board for a total of 88 3.5" x 3.5" blocks

i made a 'template board' to make marks for each spacer on every 2x4 so that I knew where to predrill holes. It also helped with alignment during assembly

# THE HEADBOARD

i made my headboard slats the same length as my platform slats: 88" and I used 8 of them.

the video shows how to make good half lap joints with the circular saw, you could also stack blocks like on the platform to build the headboard.

my vertical support is on the 5th spacer in from each edge.
